## MATHEMATICS

## TIME: 45 MINUTES

- Try to answer all the questions.
- Write your working and your answer in the space provided after each question.
- Answers should be written in their simplest form. For example, $\frac{1}{4}$ is simpler than $\frac{2}{8}$ and the mixed number $1 \frac{1}{4}$ is simpler than $\frac{5}{4}$.
- If you cannot answer a question, leave it and go on to the next one.
- Use any time you have left to check your answers and go back to any questions you have left out.

31. Polygons are closed shapes with straight sides.

To work out the interior angle of a regular polygon you use the formula:

$$
\text { Interior angle }=180-\frac{360}{n}
$$

where $n$ is the number of sides.
For example:

$$
\text { Equilateral triangle } \begin{aligned}
n & =3 \\
\text { Interior angle } & =180-\frac{360}{3} \\
& =180-120 \\
& =60^{\circ}
\end{aligned}
$$

Regular octagon $\quad n=8$

$$
\begin{aligned}
\text { Interior angle } & =180-\frac{360}{8} \\
& =180-45 \\
& =135^{\circ}
\end{aligned}
$$

Different regular polygons with the same side lengths are going to be drawn inside one another.
(a) The outer polygon has 8 sides, and the inner polygon has 3 sides.

Find the value of $x$.

$\qquad$ $\circ$

32. A shop keeper sells bags of crisps and bars of chocolate in the ratio 4:7.

The ratio of bags of ready salted crisps to bags of salt and vinegar crisps is 3:5.
The ratio of bars of milk chocolate to bars of dark chocolate is 2:5.
If the shop keeper sells 20 bars of dark chocolate, how many bags of salt and vinegar crisps do they sell?
