STATISTICS
8382/1H
Higher Tier Paper 1
Mark scheme
June 2022
Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

## Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Statistics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

M Method marks are awarded for a correct method which could lead to a correct answer.

A Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.

B Marks awarded independent of method.
ft

SC Special case. Marks awarded for a common misinterpretation which has some mathematical worth.

M dep $\quad$ A method mark dependent on a previous method mark being awarded.

B dep A mark that can only be awarded if a previous independent mark has been awarded.
oe $\quad$ Or equivalent. Accept answers that are equivalent. eg accept 0.5 as well as $\frac{1}{2}$
[a, b] Accept values between a and b inclusive.
$[\mathrm{a}, \mathrm{b}) \quad$ Accept values $\mathrm{a} \leq$ value $<\mathrm{b}$
3.14... Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416

Use of brackets It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

## Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

## Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

## Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

## Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

## Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

## Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

## Work not replaced

Erased or crossed out work that is still legible should be marked.

## Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

## Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

## Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | 0.05 | B1 |  |

| $\mathbf{Q}$ | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| $\mathbf{2}$ | skew | B1 |  |

| $\mathbf{Q}$ | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| $\mathbf{3}$ | $\frac{1}{3}$ | B1 |  |

| Q | Answer | Marks | Comments |
| :---: | :--- | :---: | :---: |
| 4 | stratification | B1 |  |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 5(a) | $[38,42]$ | B1 |  |

| Q | Answer | Marks | Comments |
| :---: | :--- | :---: | :---: |
| 5(b) <br> the general trend is (mainly) <br> downwards/decreases <br> or <br> negative correlation | Against: <br> some older ages are more likely <br> than younger ones with example, eg <br> 61+ compared to 60 <br> or <br> references specific ages which show <br> statement is incorrect <br> or <br> correct reference to <br> peaks/spikes/gradients | B1 | oe general statement |

Additional guidance for this question is on the next page

| 5(b) | Additional Guidance |  |
| :---: | :---: | :---: |
|  | Ignore any non-contradictory or irrelevant statements |  |
|  | If answers reference numbers rather than percentages then B1Max, eg <br> The numbers of people passing decreases over time and more people aged 17 pass than aged 16 | B0B1 |
|  | If values are used, they must be between the correct graduations given on vertical axis unless clearly on a given value, eg <br> Age 42 given as $36(\%)$ is acceptable as value [32, 37] <br> Age 23 given as $47(\%)$ is the only possible correct value |  |
|  | For: <br> Percentage decreases as age increases <br> Lower percentage of over 40s passed than under 40s <br> From 24 to 42 the pass rate decreases <br> About $48 \%$ of 18 s pass compared to only $37 \%$ of $60+$ (implies a trend) <br> Less likely to pass at 40 than 30 (does not imply a trend) <br> Line of best fit is negative <br> A higher proportion of older people fail (repeating the original statement) | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \\ & \text { B0 } \\ & \text { B0 } \end{aligned}$ |
|  | Against: <br> Pass rate rises and fall <br> Lines goes up at 60+ <br> More likely to pass at 16 than 18 <br> More likely to pass at 16 than 17 <br> Some 40 to 60s are higher than expected <br> Reference to unreliable or inaccurate source/graph/data without another correct evaluation | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \\ & \text { B0 } \\ & \text { B0 } \end{aligned}$ |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 6(b) | Any correct comparison of populations in the two years, eg <br> The population (aged 20-29) is greater (in 1961 than in 1851) | B1 | oe <br> eg the number of males (or females) (aged 20-29) is greater (in 1961 than in 1851) |  |
|  | Any correct comparison between genders, eg <br> In 1851, there were more females than males (in the 20-29 age group) <br> or <br> (In 1961,) there were more males than females (in the 20-29 age group) <br> or <br> The gender gap / range has decreased <br> or <br> The gender gap has reversed | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Condone any incorrect calculations with a correct statement |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | The males have gone up, the females have gone up, the males have gone up by more than the females |  |  | B1B0 |
|  | There's a bigger population (now) <br> There was a smaller population before <br> They've both more than doubled <br> There was a smaller population in 1851 <br> There was a smaller population |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \end{aligned}$ |

| Q | Answer | Marks |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 7(a)(i) | $\frac{150000-135000}{1000} \times 0.05$ | M1 | oe |  |
|  | 0.75 | A1 | oe eg $75 \%$ |  |
|  | Additional Guidance |  |  |  |
|  | Do not ignore further work, eg $15 \times 0.05=0.75$, answer 99.25 |  |  | M1A0 |
|  | 0.75\% |  |  | M1A0 |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 7(a)(ii) | their $0.75 \times$ their 0.75 | M1 | oe |  |
|  | $\frac{9}{16}$ <br> or 0.5625 or 0.56 or 0.563 <br> or $56.25 \%$ or $56 \%$ or $56.3 \%$ | A1ft | oe equivalent fraction ft their 7(a)(i) |  |
|  | Additional Guidance |  |  |  |
|  | Answers must be correct to 2sf or better |  |  |  |
|  | Ignore any attempt to round after the correct answer seen, eg$0.5625=0.562$ |  |  | M1A1 |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 7(a)(iii) | Selling in one month is independent to selling in another | B1 | oe eg months are independent |  |
|  | Additional Guidance |  |  |  |
|  | Condone use of 'probability'/'chance' for 'risk' |  |  |  |
|  | The risk each month is the same <br> The risk stays the same over time (implies each month) The risk is (still) the same |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \end{aligned}$ |
|  | The risk of not selling in month one is the same as the risk of not selling in month two |  |  | B1 |
|  | The risk of not selling in one month is the same as not selling in two months |  |  | B0 |
|  | She doesn't sell the house in the first month |  |  | B0 |
|  | The price stays the same |  |  | B0 |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 7(b)(i) | Alternative method 1 - Starting with £135000 |  |  |
|  | $\begin{aligned} & 1 \div 0.05 \text { or } 20 \\ & \text { or } 20000 \end{aligned}$ | M1 | oe |
|  | (£)155000 | A1 |  |
|  | Alternative method 2 - Starting with £150000 |  |  |
|  | $5(\times 1000)$ or 5000 | M1 | oe |
|  | (£)155000 | A1 |  |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 8(b) | 5 | B1 |  |

| Q | Answer | Marks | Comments |
| :---: | :--- | :--- | :--- |
| 8(c) | Any correct statement referring to <br> the trend of both from 2010 to <br> 2018 eg, <br> both private and public sectors <br> increased (from 2010 to 2018) | B1 | oe |
|  | Any correct statement referring to <br> pay before and after 2014 eg, <br> before 2014, public was higher but <br> after 2014 private was higher | B1 | oe |

Additional guidance for this question is on the next page

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 9(a) | All 3 correct answers | B2 | B1 1 or 2 correct answers |  |
|  | Additional Guidance |  |  |  |
|  | Description |  | Type of Data |  |
|  | How likely students are to recommend studying GCSE Statistics. <br> e.g. Very unlikely, unlikely, likely or very likely |  | Qualitative |  |
|  | Age group people are in. <br> e.g. $11-12,13-14,15-16$ or $17-18$ |  | dinal |  |
|  | People's eye colour. <br> e.g. Blue, brown, green, haze! or other |  | Bivariate |  |
|  | Age and value of cars <br> e.g. $£ 12500$ and 3 years old |  | Categorical |  |

| Q | Answer | Marks | Comments |  |

| Q | Answer | Marks |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 10(a) | 0.2 and 0.8 in correct positions | B1 | oe |  |
|  | $0.76 \div$ their 0.8 or 0.95 | M1 | oe <br> may be seen on diagram or can be implied from answer to their calculation |  |
|  | $0.05 \div$ their 0.2 or 0.25 | M1 | oe <br> may be seen on diagram or can be implied from answer to their calculation |  |
|  | Fully correct diagram | A1 |  |  |
|  | Additional Guidance |  |  |  |
|  |  | rive at wor On time <br> Late On time <br> Late |  | 4 marks |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 10(b) | Alternative method 1 |  |  |
|  | their $0.8 \times$ their 0.05 or 0.04 | M1 | oe <br> from diagram or calculation |
|  | $\begin{aligned} & (0.05+\text { their } 0.04) \times 225 \\ & \text { or } \\ & 20.25 \end{aligned}$ | M1dep | allow their $0.2 \times$ their 0.25 for 0.05 |
|  | 20 or 21 | A1ft | ft for their tree diagram must be integer value |
|  | Alternative method 2 |  |  |
|  | their $0.04 \times 225$ or 9 or their $0.05 \times 225$ or 11.25 | M1 | oe from diagram or calculation |
|  | ```their 0.04 * 225 or 9 and their 0.05 * 225 or 11.25 or 20.25``` | M1dep |  |
|  | 20 or 21 | A1ft | ft for their tree diagram must be integer value |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 11(a) | Fully correct histogram with bars correct widths with f.d. of 3.6, 0.8 and 0.6 | B3 | B2 2 correct bars or 2 correct frequency densities <br> B1 1 correct bar or 1 correct frequency density <br> $\pm \frac{1}{2}$ square tolerance |
|  | Additional Guidance |  |  |
|  | Condone any shading |  |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Identifies 50th or 50.5 th term as median <br> or <br> Identifies $5<t \leq 15$ as group containing median | M1 | could be implied by $5+\frac{n}{22} \text { where } n<22$ <br> or <br> vertical line in bar for $5<t \leq 15$ |  |
| 11(b) | $\frac{10}{22}(\times 10) \text { or } \frac{10.5}{22}(\times 10)$ <br> or $[4.5,4.55] \text { or }[4.77,4.8]$ | M1dep | oe $\frac{10}{22}$ or $\frac{10.5}{22}$ implies M1M1dep |  |
|  | [9.5, 9.55] or [9.77, 9.8] | A1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Do not accept 2nd bar circled as identification of their median for M1 unless labelled as median or vertical line drawn in bar |  |  |  |
|  | Ignore any attempt to round after the correct answer seen, eg$9.77=10$ |  |  | M1M1depA1 |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 11(c) | Only shows data for 100 trains/might not be representative <br> or <br> Do not know how many trains ran or <br> Data only shows trains which were delayed/don't know how many were on time <br> or <br> May only have been collected over one day/short time period or no time period given <br> or <br> May be performing better than other companies | B1 |  |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Most could have been on time |  |  | B1 |
|  | May have only been for one day (and there might have been bad weather / factors out of their control) |  |  | B1 |
|  | Was only for one day and there might have been bad weather / factors out of their control (we do not know the time period) |  |  | B0 |
|  | Data could be outdated |  |  | B0 |
|  | There may have been something outside the train companies control eg bad weather |  |  | B0 |
|  | Any reference to trains being only delayed for a short time, eg Modal class is low / most trains only had a short delay Positive skew |  |  | $\begin{aligned} & \text { B0 } \\ & \text { B0 } \end{aligned}$ |

| Q | Answer | Marks | Comments |
| :---: | :---: | :---: | :---: |
| 12(a) | $\frac{n}{800} \times 100$ where $34<n<176$ | M1 | oe |
|  | $(9,17)$ | A1 |  |

| $\mathbf{Q}$ | Answer | Marks | Comments |
| :---: | :--- | :---: | :---: |
| $\mathbf{2} \mathbf{2}(\mathbf{b})$ | top table $\rightarrow-0.845$ | B1 |  |
|  | bottom table $\rightarrow 0.831$ | B1 |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 12(c) | ... a strong negative correlation between time (after 8 am ) and the number of space available | B1ft | oe ft unless 1.25 chosen |  |
|  | ... a strong positive correlation between time (after $1 \mathrm{pm} /$ after 5 hours) and the number of spaces available | B1ft | oe ft for a different value chosen but not 1.25 |  |
|  | Additional Guidance |  |  |  |
|  | Do not accept trend for correlation |  |  |  |
|  | Ignore any non-contradictory or irre | t statem |  |  |
|  | Do not accept correlation without context for B2, eg <br> For top table <br> (The two sets of data have a) strong negative correlation and <br> For bottom table <br> (The two sets of data have a) strong positive correlation |  |  | B0B1 |
|  | For top table <br> (The two sets of data have a) negative correlation and <br> For bottom table <br> (The two sets of data have a) positive correlation |  |  | B0B0 |

| Q | Answer | Marks |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 12(d) | The car park is only full for about 2-4 hours | B1 | oe eg less than $50 \%$ of the time |  |
|  | There is no information about other car parks (which may not be full) or <br> Only talks about one day (not representative) <br> or <br> May be only 800 cars/everyone who needed a space got one | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any values or calculations if intention is clear |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Condone 10 hours for 10 readings |  |  |  |
|  | For first B1 <br> Only full between 12 and 2 pm <br> Not too full between 8 and 9 (and 4 and 5) <br> For $5-7$ hours there are spaces available <br> For majority of the day there are spaces <br> Carpark is never full |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \end{aligned}$ |
|  | For second B1 <br> It only shows that this car park is full (implies other car parks) This data is only for 8am to 5 pm |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B0 } \end{aligned}$ |

| 14(a) | control (group) | B1 |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 14(b) | 1 - (good method because it) avoids bias/ is more representative (of those with pre-conceived ideas about the results) <br> or <br> 1 - (good method because it) should ensure a roughly equal split of people allocated to each group | B1 | oe |  |
|  | 2 - (good method because) everyone is in the group in which (they think) they would perform the best <br> or <br> 2 - (good method because it) will be easier to carry out (no need to select) <br> or <br> 2 - (good method because it) is quicker / less time consuming <br> or <br> 2 - (poor method because) most people may want to be in Group B (so they listen to their favourite song) <br> or <br> 2 - (poor method because) unlikely to be representative/ biased/ people may choose the group they think they'll do better in <br> or <br> 2 - (poor method because) groups may be uneven | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | 1 - unbiased/representative and 2 - biased/unrepresentative |  |  | B1B1 |
|  | 2 - may be distracted by their friends and unrepresentative <br> 2 - may be distracted by their friends / may not have a/their favourite song |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B0 } \end{aligned}$ |
|  | 1 - time consuming |  |  | B0 |

| Q | Answer | Marks | Comments |  |
| :---: | :--- | :---: | :--- | :--- |
| 14(c)(i) Any variable other than the music <br> that might affect reaction time <br> eg tiredness, eyesight, hearing, <br> other noise, health issues, age, <br> gender    <br>  Additional Guidance   oe <br>  Music played to group B may distract Group A <br> (music is 'other noise' to Group A)    | B1 |  |  |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 14(c)(ii) | Ensure all participants have similar values for their variable in (i) | B1 | oe <br> eg pair participants according to a measure taken of the variable mentioned in (i) |  |
|  | Additional Guidance |  |  |  |
|  | B1 can be scored even if B0 awarded in 14(c)(i) eg <br> References volume of music in 14(c)(i) and states effective control measure, eg set all volumes the same |  |  | B1 |
|  | Make sure both groups contain similar numbers of males and females <br> Make sure both groups contain males and females Put all the males in one group and all the females in another |  |  | B1 <br> B0 <br> B0 |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 15(b) | Any two from: <br> Saves time/cheaper compared to census or easier than obtaining/ dealing with information from all previous students <br> or <br> states it would have been almost as easy to just get all the years results or <br> less reliable/accurate/representative or <br> makes database smaller/more manageable | B2 | oe <br> B1 for 1 correct answer |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Reference to people not remembering/exaggerating their results |  |  | B0 |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 15(c)(i) | The additional data for even years will have altered the overall proportion <br> or <br> the proportions (which were averaged) will have been rounded (so cumulative rounding errors will have occurred) <br> or <br> different years will have different number of students taking A level maths (so the average of each year's proportion should have been weighted according to numbers) | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Estimated mean |  |  | B0 |
|  | Takes the whole population into account X involves all the years (implies Y doesn't) Data not for all years <br> Data for all years |  |  | $\begin{aligned} & \mathrm{B} 1 \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B0 } \end{aligned}$ |
|  | Referencing A* not existing until 2010 scores B0 without another correct comment |  |  |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 15(c)(ii) | The proportions (which were averaged) will have been rounded (so cumulative rounding errors will have occurred) <br> or <br> different years will have different number of students taking A level maths (so the average of each year's proportion should have been weighted according to numbers) | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Reason given must be different to 15(c)(i) if B1 awarded in 15(c)(i) |  |  |  |
|  | Estimated mean |  |  | B0 |
|  | Referencing A* not existing until 2010 scores B0 without another correct comment, eg <br> X has data for all years however A* did not exist before 2010 |  |  | B1 |

| Q | Answer | Marks | Comments |
| :---: | :--- | :---: | :--- |
|  | An appropriate stem drawn for their <br> diagram(s) for the given data | B1 | stem should cover tens values of 3, <br> 4,5 and 6 for a back-to-back <br> diagram <br> oe eg <br> decimal values 0.3, 0.4, 0.5 and <br> 0.6 |
|  | Shoab's data shown correctly on a <br> stem and leaf diagram (on either <br> side if back-to-back) | B1 | Shoab's data may be seen on one <br> side of an unlabelled diagram |
|  | Correct labels and an appropriate <br> key covering both data sets | B1 | may see separate keys for each <br> data set which must be correctly <br> orientated for the data set |
|  | Evidence that values for National <br> data are rounded to 2 sf in order to <br> plot | M1 | eg may be seen on diagram, eg <br> three correct values plotted in <br> correct stem row(s) with correct <br> single digit leaf |
|  | National data shown fully correctly <br> on a back-to-back stem and leaf <br> diagram | A1 |  |

Additional guidance for this question is on the next page

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 15(d)(ii) | Correct value for their median for school <br> or <br> correct value for their median for national | B1ft | 50 for school <br> 43 for national <br> (if stem and leaf correct) <br> second value may be implied by reference to difference |  |
|  | Correct comparative contextual statement for their medians with at least one correct | B1ft | eg the school had a higher proportion of $A$ and $A^{*}$ grades (on average) or better results |  |
|  | Correct value for their IQR for school | B1ft | $\text { (56-46 } 10$ <br> (if stem and leaf correct) |  |
|  | Correct value for their IQR for national | B1ft | $(45-41=) 4$ <br> (if stem and leaf correct) |  |
|  | Correct comparative contextual statement for their IQRs with at least one correct | B1ft | eg the proportio more va | varied rades |
|  | Statement correctly comparing the trends | B1 | eg both have ge decreas | nal res and th |
|  | Additional Guidance |  |  |  |
|  | Condone reference to results rather than proportions/grades |  |  |  |
|  | For $2^{\text {nd }} \mathrm{B} 1$ <br> On average the school did better (than the national average) Median is higher for the school |  |  | $\begin{aligned} & \text { B1 } \\ & \text { B0 } \end{aligned}$ |
|  | Values may be calculated from a list of data |  |  |  |
|  | Ignore any comparisons of means or ranges or modes |  |  |  |
|  | Values for median and IQR must be correctly evaluated for thei ordered data |  |  |  |

| Q | Answer | Marks | Comments |  |
| :---: | :---: | :---: | :---: | :---: |
| 15(e) | Different entry policies (onto the course or for the exam) at the school/compared to nationally or <br> references that only $\mathrm{A} / \mathrm{A}^{*}$ grades have been considered, conclusions could have been different if other grades considered (eg looking at C and above) <br> or <br> sampling / some poor performing years could have been missed | B1 | oe |  |
|  | Additional Guidance |  |  |  |
|  | Ignore any non-contradictory or irrelevant statements |  |  |  |
|  | Referencing A* not existing until 2010 scores B0 without other correct comment |  |  |  |
|  | Populations may change / be different |  |  | B0 |
|  | Unreliable data source for national data |  |  | B0 |
