A-level FURTHER MATHEMATICS

Paper 3 Mechanics

Time allowed: 2 hours

Materials

- You must have the AQA Formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification.
- You must ensure you have the other optional Question Paper/Answer Book for which you are entered (either Discrete or Statistics). You will have 2 hours to complete both papers.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer each question in the space provided for that question.
 If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do not write outside the box around each page or on blank pages.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 50.

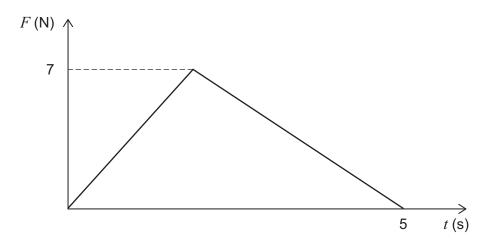

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

Answer all questions in the spaces provided.

1 The graph shows how a force, *F* newtons, varies during a 5 second period of time.

Calculate the magnitude of the impulse of the force.

Circle your answer.

2 A car of mass 1200 kg is travelling at a constant speed of $18\,\mathrm{m\,s^{-1}}$ on a straight horizontal road.

The car experiences a total resistive force of 240 newtons.

Calculate the power of the car's engine.

Circle your answer.

900 W

4320 W

16 000 W

21600W

3 Three particles are attached to a light rod, AB, of length 40 cm

The particles are attached at A, B and the midpoint of the rod.

The particle at A has mass 5 kg

The particle at B has mass 1 kg

The particle at the midpoint has mass 4 kg

Find the distance of the centre of mass of this system from the midpoint of the rod.

Circle your answer.

5	A train of mass $10000\mathrm{kg}$ is travelling at $0.3\mathrm{ms^{-1}}$ when it collides with a buffer. The buffer brings the train to rest.
	As the buffer brings the train to rest it compresses by 0.2 metres.
	When the buffer is compressed by a distance of \boldsymbol{x} metres it exerts a force of magnitude \boldsymbol{F} newtons, where
	$F = Ax + 9000x^2$
	where A is a constant.
5 (a)	Find, in terms of A , the work done in compressing the buffer by 0.2 metres. [2 marks]
5 (b)	Find the value of ${\cal A}$ [2 marks]
	Turn over for the next question
	rum over for the next question

6	A particle, of mass $5\mathrm{kg}$, moves on a circular path so that at time t seconds it has position vector \mathbf{r} metres, where			
	$\mathbf{r} = (2\sin 3t)\mathbf{i} + (2\cos 3t)\mathbf{j}$			
6 (a)	Prove that the velocity of the particle is perpendicular to its position vector.	[4 marks]		

6 (b)	Prove that the magnitude of the resultant force on the particle is constant.	[3 marks]
	Turn over for the next question	

7	Two snooker balls, one white and one red, have equal mass.				
	The balls are on a horizontal table ABCD				
	The white ball is struck so that it moves at a speed of $2\mathrm{ms^{-1}}$ parallel to AB				
	The white ball hits a stationary red ball.				
	After the collision, the white ball moves at a speed of $0.8\mathrm{ms^{-1}}$ and at an angle of 30° to AB				
	After the collision, the red ball moves at a speed $v\mathrm{m}\mathrm{s}^{-1}$ and at an angle θ to CD				
	When the collision takes place, the white ball is the same distance from AB as the distance the red ball is from CD				
	The diagram below shows the table and the velocities of the balls after the c	ollision.			
		В			
	30°				
	0.0 m = 1				
	0.8 m s ⁻¹				
	$v \text{ m s}^{-1}$				
	D	С			
	Not to scal	е			
	After the collision, the white ball hits AB and the red ball hits CD				
	Model the balls as particles that do not experience any air resistance.				
7 (a)	Explain why the two balls hit the sides of the table at the same time.	[2 marks]			

7 (b)	Show that $\theta = 17.0^{\circ}$ correct to one decimal place. [4 marks]
7 (c)	Find v [2 marks]
7 (d)	Determine which ball travels the greater distance after the collision and before hitting the side of the table.
	Fully justify your answer. [2 marks]
7 (e)	State one possible refinement to the model that you have used. [1 mark]

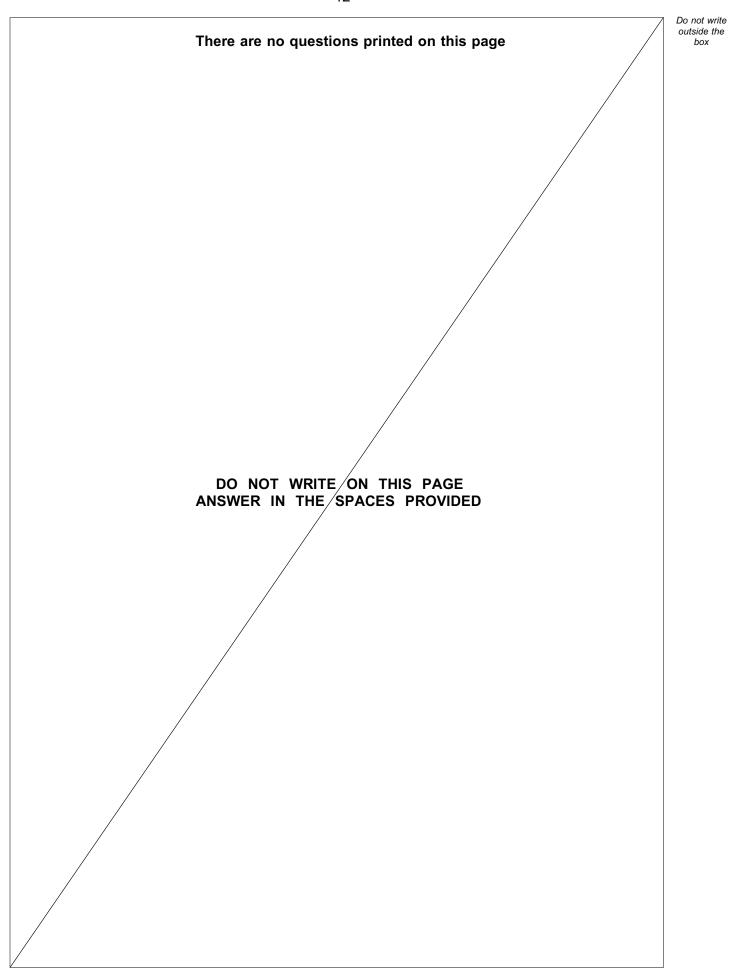

8	In this question use g as $9.8\mathrm{ms^{-2}}$
	A rope is used to pull a crate, of mass 60 kg, along a rough horizontal surface.
	The coefficient of friction between the crate and the surface is 0.4
	The crate is at rest when the rope starts to pull on it.
	The tension in the rope is 240 N and the rope makes an angle of 30° to the horizontal.
	When the crate has moved 5 metres, the rope becomes detached from the crate.
8 (a)	Use an energy method to find the maximum speed of the crate. [4 marks]

8 (b)	Use an energy method to find the total distance travelled by the crate.
	[2 marks]
8 (c)	A student claims that in reality the crate is unlikely to travel more than 5.3 metres in
()	total. Comment on the validity of this claim.
	[2 marks]
	Turn over for the next question

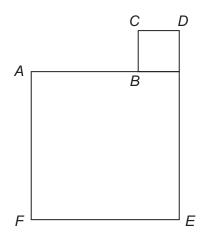

9 Two blocks have square cross sections.

One block has mass 9 kg and its cross section has sides of length 20 cm

The other block has mass 1 kg and its cross section has sides of length 4 cm

The blocks are fixed together to form the composite body shown in **Figure 1**.

Figure 1

9 (a)	Find the distance of the centre of mass of the composite body from AF	[2 marks]

Question 9 continues on the next page

a	(b)	Λ uniform	rod has	mace 12 kg	and length 1	motro
9	(D)	A uniionii	Tou Has	mass 12 kg	and length i	mene.

One end of the rod rests against a smooth vertical wall.

The other end of the rod rests on the composite body at point B

The composite body is on a horizontal surface.

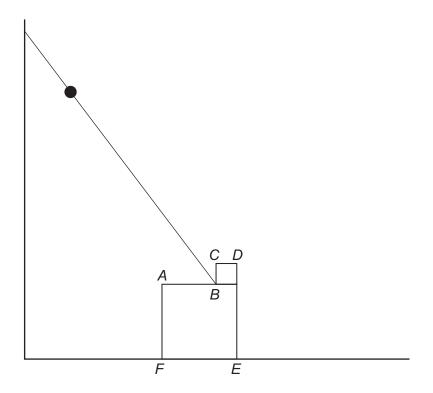

The coefficient of friction between the composite body and the horizontal surface is 0.3

The angle between the rod and AB is 60°

A particle of mass $m \log s$ is fixed to the rod at a distance of 75 cm from B

The rod, particle and composite body are shown in Figure 2.

Figure 2

3 (b) (i)	Write down the magnitude of the vertical reaction force action of <i>m</i> and <i>g</i>	ing on the re	od at b iii teiiii
	· · · · · · · · · · · · · · · · · · ·		[1 mar

		[i iliai k]

9 (b) (ii)	Show that the magnitude of the horizontal reaction force acting on the rod at B is	
	$\sigma(6+0.75m)$	
	$rac{g(6+0.75m)}{\sqrt{3}}$	
	[3 m	arks]
	·	•
	Question 9 continues on the next page	

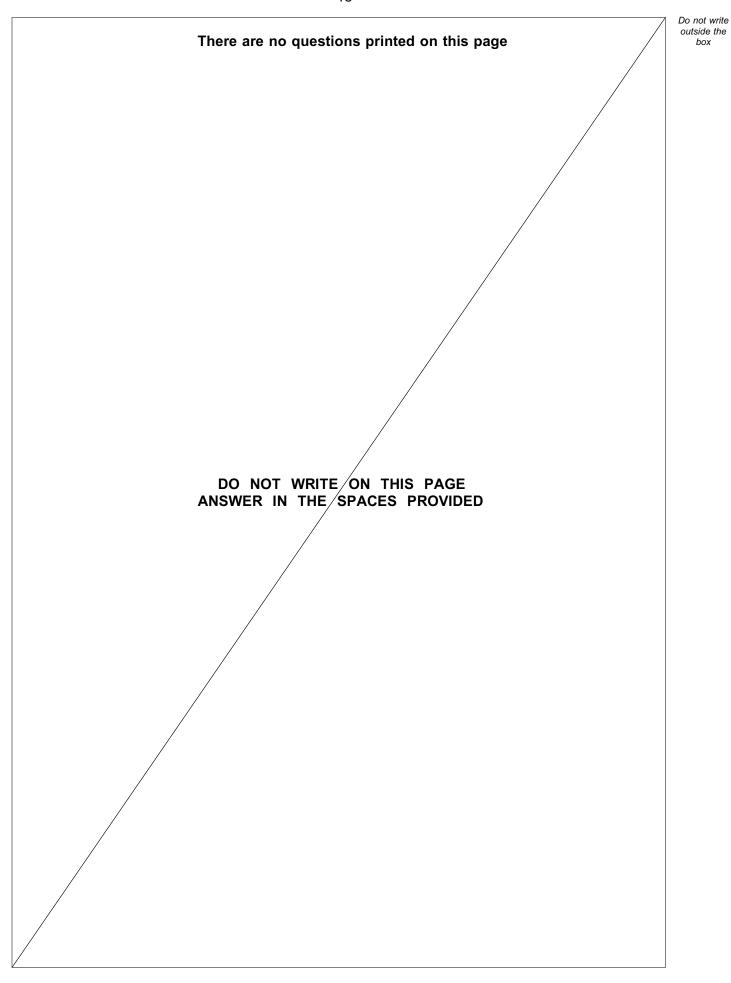

Find the maximum value of m for which the composite body does not slide or topple.		
Fully justify your answer.		
	[6 marks
